

Que peut-on faire avec ces dessins ?

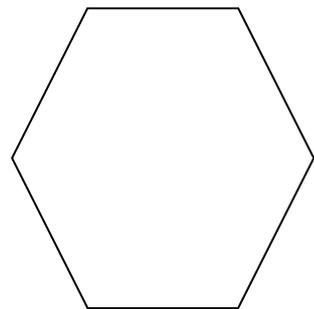

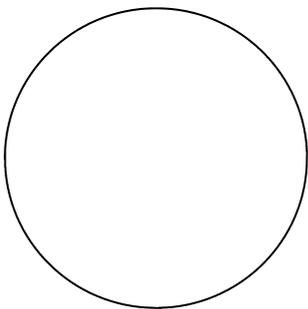

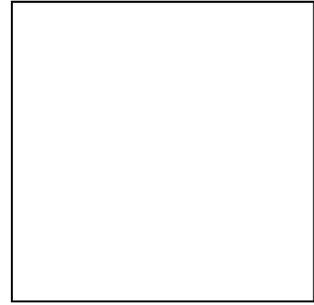

L'idée de base est d'avoir un outil qui permet de travailler à la fois la perception visuo-spatiale et l'organisation visuo-spatiale...
Mais d'autres utilisations peuvent sans doute être trouvées !!
Cette réalisation s'inspire du Jeu COMPOX, initialement proposé par ortho-éditions et qui n'est plus édité...

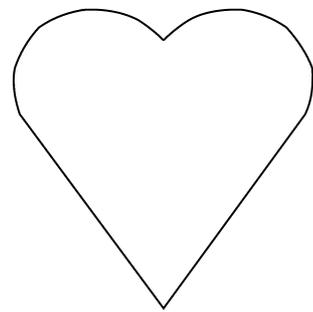

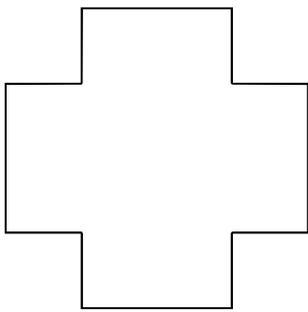

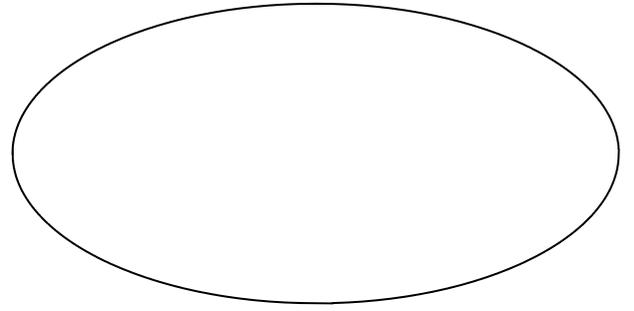

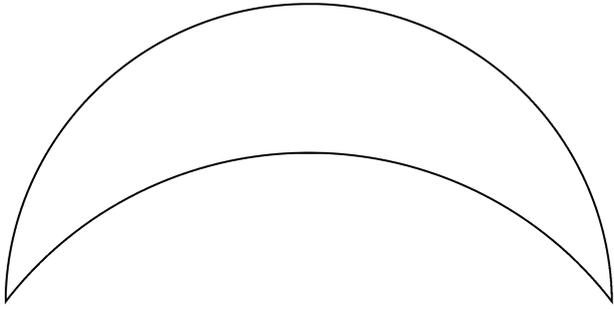

Perception visuo-spatiale : imprimer sur des feuilles transparentes des 12 formes individuelles. Travailler préalablement sur la description des caractéristiques physique des 12 formes.
Proposer ensuite de choisir parmi les 12 formes lesquelles ont été utilisé dans les figures entremêlées n° 1 à 33.

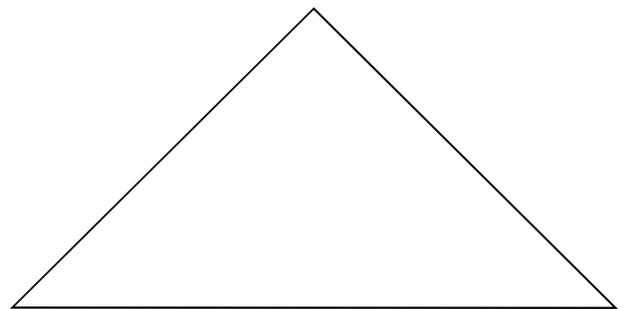

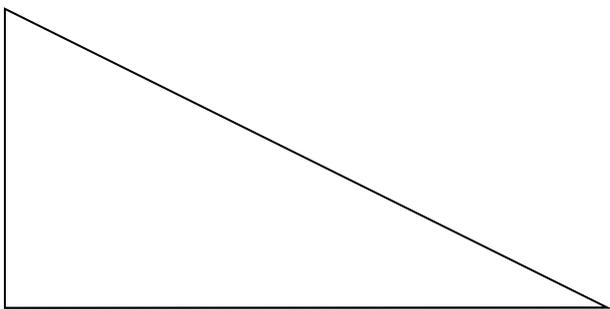

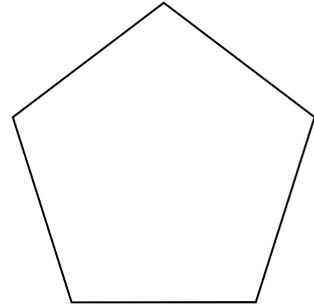

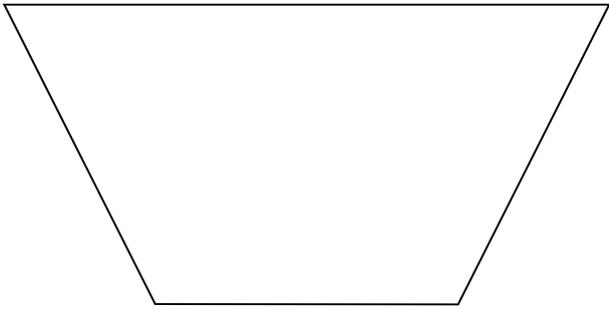

Organisation visuo-spatiale : avec les mêmes feuilles transparentes, proposer à l'enfant de reproduire les figures entremêlées, en superposant les feuilles transparentes.
On peut par la suite passer à l'étape graphique de reproduction de ces figures entremêlées...

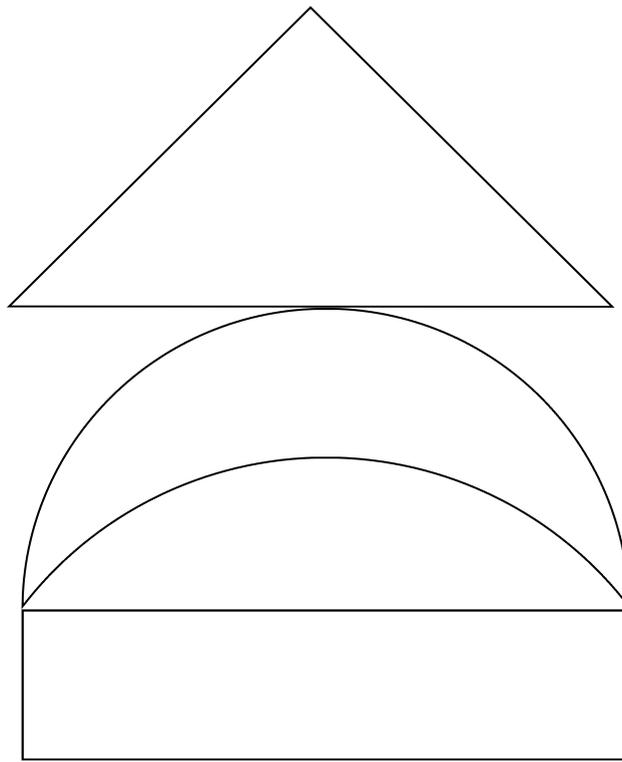

Les 33 figures entremêlées utilisent parfois les mêmes formes individuelles agencées de 3 façons différentes.

Amusez-vous bien !!!!
